**Abstract of JP 2001236324 (A)**

**PROBLEM TO BE SOLVED:** To secure high security performance as to secret information by protecting and guarding the secret information by using individual authentication by biometric information which cannot be stolen or imitated. **SOLUTION:** When a matching part 30 compares biometric feature information for comparison with biometric feature information for reference and confirms that the biometric feature information for comparison is of the owner's, a display control part 60 performs control so that the secret information is read out of a storage part 40 and displayed at a display part 50.
